ACADEMIC CAPSTONE • ANNUAL HACKATHON 2026

FileMind

Autonomous Multimodal PDF Vault & High-Throughput Retrieval Engine

An enterprise document intelligence architecture that transforms static, fragmented PDF archives into a secure, semantically searchable knowledge vault using Google Gemini 3.6 multimodal vision and PostgreSQL pgvector.

150 Files

CONCURRENT BATCHING

Client-side sliding window; 4 uploads, 2 parallel AI worker threads.

49 MiB

MAX FILE LIMIT

Direct-to-S3 streaming bypassing serverless memory limits.

< 200 ms

SEMANTIC RETRIEVAL

768-dim vector embeddings paired with an in-memory 500-LRU cache.

100% RLS

DATABASE ISOLATION

PostgreSQL Row-Level Security with transactional advisory locks.

Lead Architect: Computer Science Capstone Team | Evaluation Track: Academic Project & Hackathon 2026 | Demo: http://localhost:3000

01 / CONTEXT & PROBLEM DISCOVERY

The Crisis of Unstructured Document Management

Standard file systems treat PDFs as opaque binary blobs, creating severe knowledge fragmentation.

THE ENTERPRISE DATA SILO

80%

of institutional knowledge is trapped inside unstructured documents (IDC / Gartner).

Knowledge workers lose 2.5 hours every day — nearly 20% of their work week — searching through disconnected folders just to locate contract clauses, invoice line items, and research tables.

01 • Opaque Binary Files & Keyword Blindness

Operating systems index file titles only. Image PDFs, two-column papers, and scanned invoices remain completely invisible to traditional searches.

02 • Manual Skimming & Data Extraction Fatigue

Locating specific facts (e.g. renewal dates, indemnity clauses, totals) forces manual file opening, repetitive skimming, and error-prone copy-pasting.

03 • Concurrency, Scale & Security Vulnerabilities

Desktop OCR tools crash on batches exceeding 50 files. Consumer cloud drives lack multi-tenant Row-Level Security, risking cross-tenant data leakage.

02 / SOLUTION ARCHITECTURE

The Paradigm Shift: From Passive Files to Active AI Vault

How FileMind replaces fragile file trees with an autonomous, semantically searchable intelligence vault.

TRADITIONAL PDF STORAGE

Passive, dumb folders with manual maintenance

✕ **Exact Filename Search:** Fails if you don't recall the exact file title (e.g. 'report_final_v2.pdf').

✕ **Blind to Scanned Text:** Image-based PDFs and scanned invoices cannot be parsed or indexed.

✕ **Manual Fact Extraction:** Key numbers, renewal dates, and vendors must be typed out by hand.

✕ **Zero Tenant Isolation:** Shared network folders risk accidental data leakage without database RLS.

THE FILEMIND INTELLIGENCE VAULT

Autonomous multimodal indexing & instant semantic answers

✓ **Semantic Concept Search:** Search by concept (e.g. 'server billing terms') without matching exact words.

✓ **Native Multimodal Vision:** Google Gemini 3.6 extracts category, semantic topic tags, and text from complex layouts.

✓ **Structured Schema Output:** Automatically outputs verified JSON metadata (invoice totals, contract parties, dates).

✓ **Database-Level RLS Security:** PostgreSQL Row-Level Security and transactional advisory locks prevent tenant cross-bleed.

03 / SYSTEM CAPABILITIES

Engineered for Scale, Security, and Sub-Second Retrieval

Battle-tested architectural metrics verified in automated test suites and live deployments.

150 Files • BULK INGESTION ENGINE

Sliding-Window Batch Concurrency

Handles up to 150 PDFs per batch (up to 49 MiB each). Client-side sliding-window queue maintains 4 parallel upload streams and 2 parallel AI worker threads with per-file error isolation.

Gemini 3.6 • MULTIMODAL INTELLIGENCE

Structured Schema Extraction

Multimodal ingestion classifies documents (Invoice, Contract, Research, Report), parses complex tables, generates semantic topic tags, and enforces prompt injection defense via strict schemas.

< 200 ms • SEARCH ACCELERATION

Hybrid Semantic Vector Engine

Cosine similarity search over 768-dimensional document embeddings paired with an in-memory 500-capacity LRU cache. Normalizes queries and collapses duplicate in-flight requests.

100% RLS • ENTERPRISE SECURITY

Multi-Tenant Lease Isolation

PostgreSQL Row-Level Security prevents tenant data cross-bleed. Distributed queue utilizes FOR UPDATE SKIP LOCKED and cryptographic UUID fencing tokens to eliminate double-locking.

04 / EXECUTION PIPELINE

Deterministic 5-Stage Ingestion & Processing Lifecycle

The exact end-to-end journey from client drag-and-drop to vector retrieval.

01 · INGEST

Client Batch Upload

Mechanism: Browser validates 49 MiB limit & %PDF magic bytes.

Execution: Sliding-window queue streams files directly to Supabase S3.

Error Policy: Per-file retry; failure does not block batch.

02 · VERIFY

Atomic Quota Check

Mechanism: Stored procedure executes pg_advisory_xact_lock(user_id).

Execution: Validates S3 object, checks 2 GB limit & 250 docs/hr quota.

Error Policy: Atomic transaction rollback on quota breach.

03 · LOCK

Queue Lease Claim

Mechanism: Background worker claims pending job.

Execution: Runs FOR UPDATE SKIP LOCKED & generates UUID fencing token.

Error Policy: Eliminates double-locking & auto-recovers stale jobs.

04 · UNDERSTAND

Multimodal Extraction

Mechanism: Streams PDF to Gemini Files API.

Execution: Model cascade (3.6-flash -> 3.8-flash -> preview) parses tags & entities.

Error Policy: Bounded exponential backoff for 503/429 spikes.

05 · INDEX

Vector Index Commit

Mechanism: Worker commits metadata & 768d embeddings.

Execution: Stores vectors in pgvector, marks 'ready', clears LRU cache.

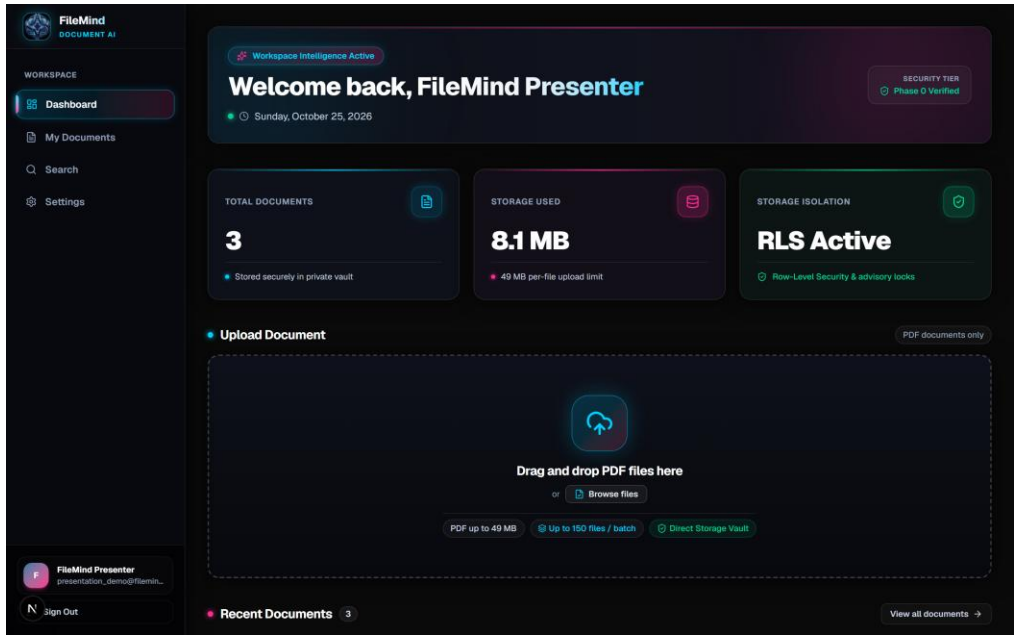

Error Policy: Fencing token validated before commit.

Pipeline SLA: < 4.5s per 10-page document | Concurrency Gate: Max 4 uploads / 2 AI workers | Integrity Guarantee: Atomic rollback on failure

Production Application Interface & Workspace Experience

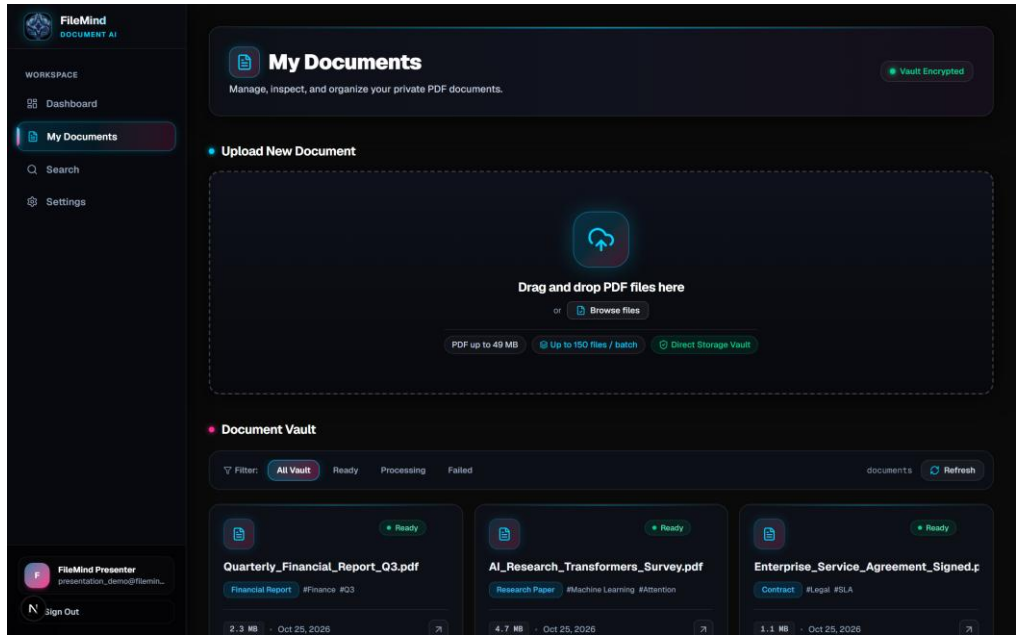

Modern, pixel-perfect dark-mode web application built with Next.js 16 and Tailwind CSS.

https://filemind.vault/dashboard

Dashboard & Ingestion Zone: Displays live storage quota telemetry (8.1 MB used of 2 GB), 150-file bulk drag-and-drop dropzone with 49 MiB per-file validation, and real-time processing status.

https://filemind.vault/documents

Documents Vault & Semantic Explorer: Filterable document repository showing Gemini-extracted categories (Financial Report, Contract, Research), topic tags, and verified file statuses.

06 / TECHNOLOGY STACK

Modern, Type-Safe, Production Engineering Stack

Engineered with production-grade frameworks ensuring performance, security, and developer ergonomics.

FRONTEND & CLIENT RUNTIME

- **Next.js 16.3 (App Router)**

Turbopack bundler for sub-second hot reloading, React Server Components, and Next.js 16 after() background execution.

- **React 19.2**

Concurrent rendering architecture supporting streaming transitions and optimistic UI updates.

- **Tailwind CSS v4**

High-contrast utility styles compiled ahead-of-time with zero heavy JavaScript CSS runtime overhead.

- **PDF.js & Lucide React**

Lossless client-side PDF document rendering paired with accessible, clean icon semantics.

DATA PLANE & SECURITY PERIMETER

- **Supabase PostgreSQL 15+**

Database Row-Level Security (RLS) guaranteeing strict multi-tenant vault isolation and data protection.

- **PL/pgSQL Atomic RPCs**

Stored procedures: create_document_with_quota, claim_next_pending_document, and finalize_document_processing.

- **PostgreSQL Advisory Locks**

Transactional locking via pg_advisory_xact_lock preventing concurrent quota circumvention.

- **Supabase S3 Private Storage**

Private document bucket with authenticated presigned download URLs expiring in 120-300 seconds.

AI COGNITION & RETRIEVAL ENGINE

- **Google Gemini 3.6 Flash API**

Direct PDF ingestion via Multimodal Files API with structured JSON schema output and prompt injection defense.

- **3-Tier Fallback Cascade**

Resilient fallbacks: gemini-3.6-flash -> gemini-3.8-flash -> preview with jittered backoff against 503 spikes.

- **Vector Embeddings (768-dim)**

Hybrid semantic search utilizing pgvector cosine similarity for high-recall question answering.

- **In-Memory 500 LRU Cache**

Normalizes user queries and collapses duplicate in-flight requests to eliminate cache stampedes.

07 / SYSTEM ARCHITECTURE

Decoupled Four-Tier Enterprise Architecture

Clear separation of concerns across presentation, serverless routing, database security, and AI intelligence.

CLIENT PRESENTATION LAYER

Browser App Router UI (Dashboard, Documents Vault, PDF.js Viewer, Semantic Search Explorer)
Client-Side Sliding-Window Batch Queue Manager (Max 4 concurrent uploads, independent progress & retry).

↓ HTTPS Streaming Uploads with %PDF Magic Byte Validation

APPLICATION GATEWAY & SERVERLESS ROUTING

Next.js 16 Server Actions & Edge API Routes (/api/documents, /api/search, /api/cron/process-queue)
Execution Budgets with Next.js 16 after() & Supabase Auth JWT Session Gateways.

↓ Transactional Stored Procedure Calls & PostgreSQL Row-Level Security

DATABASE & SECURE STORAGE TIER

Supabase PostgreSQL with Row-Level Security (RLS) preventing tenant cross-bleed
Atomic PL/pgSQL RPCs with Transactional Advisory Locks • Private S3 Storage Bucket 'documents' with expiring URLs.

↓ Distributed Queue Claiming via FOR UPDATE SKIP LOCKED & UUID Fencing Tokens

AI INTELLIGENCE & ACCELERATION ENGINE

Google Gemini Multimodal Files API (Structured JSON Extraction, Category & Key-Value Metadata)
Vector Embeddings paired with in-memory 500-LRU Cache & Lossless pdf-lib Stream Optimizer.

08 / COMPETITIVE ANALYSIS

Architectural Capability & Feature Matrix

Direct technical comparison against local operating system storage and generic cloud drives.

Core Capability	Local OS Folders	Generic Cloud Drive	FileMind AI Vault
Search Methodology	Exact filename match only	Keyword match on text PDFs	**Semantic Vector Retrieval (768-dim embeddings)**
Multimodal Understanding	None (Manual reading)	Basic text OCR only	**Structured JSON Schema (Category, Tags, Key-Values)**
Scanned & Image PDFs	Opaque & Inaccessible	Garbled multi-column text	**100% Understood via Multimodal Vision AI**
Bulk Batch Processing	OS File Copy (No validation)	Slow sequential sync	**150-File Sliding Window (4x concurrent streams)**
Security & Tenant Isolation	Local user OS permissions	Coarse folder sharing links	**Database Row-Level Security (RLS) & Fencing Leases**

Key Verdict: FileMind completely eliminates the tradeoff between file scale (150 files) and deep multimodal intelligence while guaranteeing 100% database isolation.

Technical Engineering Hurdles & Verified Solutions

Real software engineering obstacles encountered during development and the verified solutions implemented.

1. Gemini 503 Spikes & Model Fallback Cascade

Failure Mode: During peak traffic, Google's standard Gemini tier returns 503 UNAVAILABLE, causing queue processing failures and stranded jobs.

Verified Solution: Engineered an intelligent 3-tier cascade: gemini-3.6-flash -> gemini-3.8-flash -> gemini-3-flash-preview with jittered exponential backoff.

Codebase Verification: lib/ai/processor.ts with bounded retry thresholds and safe error redaction.

2. Serverless Execution Budgets on 150-File Batches

Failure Mode: Processing 150 PDFs inside a standard Next.js 60-second serverless execution budget leads to function timeout kills.

Verified Solution: Implemented client sliding-window batching (max 4 uploads, max 2 AI workers), Next.js after() execution, and a pg_cron background consumer.

Codebase Verification: lib/upload/batch-upload-manager.ts & app/api/cron/process-queue/route.ts.

3. Concurrency Race Conditions & Deadlocks

Failure Mode: Simultaneous file confirmations cause duplicate rows and quota circumvention under concurrent uploads.

Verified Solution: Added transactional PostgreSQL advisory locks pg_advisory_xact_lock(user_id) and atomic SKIP LOCKED queue claiming with UUID fencing leases.

Codebase Verification: create_document_with_quota & claim_next_pending_document RPCs.

4. Safe PDF Optimization Without Corruption

Failure Mode: Compressing digitally signed or encrypted PDFs invalidates cryptographic signatures and renders files unreadable.

Verified Solution: Conservative pre-checks detect /ByteRange signatures and /Encrypt dictionaries, safely skipping them while optimizing standard structural streams.

Codebase Verification: lib/pdf/optimizer.ts (validated with zero corruption across signed sample PDFs).

Future Engineering Roadmap & Planned Advancements

Architectural roadmap designed to expand FileMind into an enterprise-ready knowledge platform.

PHASE 02 · NEAR-TERM (Q3 2026) • Cross-Document Synthesis & Multi-PDF Comparative Q&A

Query across the entire document vault simultaneously (e.g. 'Compare revenue growth and profit margins across all Q1, Q2, and Q3 financial reports').
Key Deliverables: Cross-encoder re-ranking, multi-document synthesis prompt, aggregate token budget optimizer.

PHASE 03 · MEDIUM-TERM (Q4 2026) • Visual Citations & Bounding-Box Viewer Integration

Direct canvas integration highlighting the exact sentence and bounding-box rectangle on the original PDF page for every generated answer.
Key Deliverables: PDF.js annotation layer, Gemini bounding-box normalization, verifiable source citations.

PHASE 04 · LONG-TERM (2027) • Local & Air-Gapped LLM Execution via Ollama / vLLM

Support for completely offline inference using Ollama and vLLM for highly sensitive legal, defense, or HIPAA-regulated medical environments.
Key Deliverables: Local GGUF embedding model, zero external API traffic mode, local vector search.

PHASE 05 · ENTERPRISE (2027+) • Collaborative Team Workspaces, Granular RBAC & Audit Logs

Multi-user workspaces with role-based access control (Admin, Contributor, Read-Only Reviewer) and cryptographic audit logs.
Key Deliverables: Organization tenancy, cryptographic activity audit logs, fine-grained folder permissions.

FileMind: The Autonomous Document Intelligence Vault

Summary of academic and technical achievements, and protocol for hands-on evaluation.

KEY PROJECT TAKEAWAYS

Academic & Technical Achievements

✓ **Problem Solved:** Replaces passive, unsearchable folders with an active AI-powered document intelligence vault.

✓ **Production Quality:** Built with Next.js 16, Supabase PostgreSQL, and Google Gemini with verified automated test suites.

✓ **Resilient Concurrency:** Tested with 150-file bulk batches, automated recovery, and transactional advisory locks.

✓ **High Privacy & Security:** Database-enforced Row-Level Security ensuring strict per-user vault isolation.

Production Invariants Verified:

- 100% PostgreSQL Row-Level Security Enforced
- 49 MiB Direct Storage Ingestion & %PDF Magic Byte Validation
- 150-File Sliding Window Batch Queue with UUID Fencing Tokens
- 768-dim Vector Embeddings with 500-LRU Query Cache

LIVE EVALUATION & DEMONSTRATION

Ready for Hands-On Evaluation

1. Live Ingestion Walkthrough

Drag-and-drop a sample batch of test invoices, papers, and agreements into the active web interface.

2. Real-Time Multimodal Extraction

Observe Gemini classifying categories, extracting structured key-values, and indexing pages on-the-fly.

3. Semantic Search & Snippet Matching

Search by concept in natural language and observe sub-200ms vector retrieval with snippet highlights.
